

NO TIME TO WASTE!

END PRODUCTION OF NUCLEAR WASTE

STOP NUCLEAR POWER NOW!

Today, October 23, an international meeting about public participation in radioactive waste management takes place here, at the Aitana hotel. But most people participating are professionally involved in the nuclear (waste) industry. Talking about public participation without public participation!?

We think that first off, all production of nuclear waste should be ended. This means an immediate stop of nuclear power: closure of all nuclear power plants!

Nuclear power is dangerous, dirty and expensive; from uranium mining to radioactive waste disposal. But most of all; *nuclear power is unnecessary. The future is renewable!*
